Office Action Summary

Art Unit: 3753

Restriction to one of the following inventions is required under 35 U.S.C.

§ 121:

I. Claims 1-3 and 8-12, drawn to a switch valve, classified in Class 137, subclass 881.

II. Claims 4-7 and 13-16, drawn to a refrigeration system with a switch valve, classified in Class 62, subclass 624.6.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations. (M.P.E.P. § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed in that the grounds of rejection and/or reasons for allowance of the combination claim(s) are necessarily predicated on consideration of the additional features recited therein and not found in the subcombination claim(s).

Art Unit: 3753

The subcombination has separate utility such as a relief valve externally controllable, or a diverter valve.

Because these inventions are distinct for the reasons given above and the examination required for each Group is not the same as for the other Group(s) restriction for examination purposes as indicated is proper.

Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed.
